

'Jet' Finishing Mower

The 'ultimate' 1.5m cut, side discharge finishing mower

Building on the many strengths of the 'Magic' range – the SGG 'Jet' with pressed, one-piece deck.

- Special channels pressed into the deck – smooth grass flow, optimum crop clearance in heavy, wet conditions and better surface finish.
- Up to 40% less power than other 1.5m fabricated-deck mowers; a pressed deck is also stronger and lighter.

All mowers work better with sharp blades and without grass build-up under the deck. On many mowers, this is an awkward job that is seldom done.

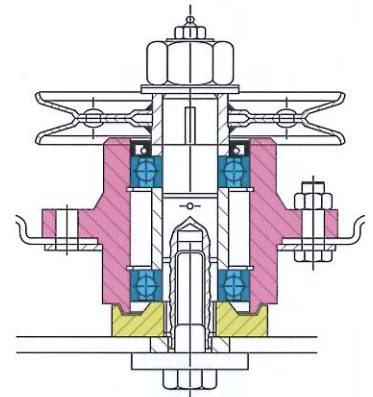

Pressed deck – optimum grass flow

Simple to clean and sharpen

The 'Jet' can be fitted with a pivoting headstock. The deck can be swung quickly to the vertical position for safe and easy cleaning and sharpening.

As an added benefit, the 'A-frame' hitch speeds up coupling to the tractor.

Bearings protected from string, wire, etc.

The ultimate finishing mower

Mid-mounted Jet available for Kioti 'CK' Series tractors – side or rear discharge

Machine Specifications	Jet 150
Cutting width (cm)	150
Overall width (cm)	189
Horsepower required	20 - 50 hp
Weight (kg)	175

Note: Mid-mounted Jet mowers available for certain tractors. Contact RECO for details

SGG's 1m³ capacity collector coupled with the 'Jet' mower gives the neatest possible finish.

Together, the front mounted Jet and rear collector generate a huge flow of air, clearing every blade of grass. The Imola motor racing circuit authorities use 'Jet' mowers with collectors to stop loose cuttings being sucked into racing car air intakes.

- Ground-tip and high-tip (2.2m) collectors available.
- Leaf collector kit with 5m hose available for the rear collector.
