

# 'Star' Scarifiers

*Two machines for the price of one!*

The SGG 'Star' is a highly effective scarifier which can be converted to a flail mower with a simple rotor change.

With scarifying normally carried out in spring and autumn and mowing right through the summer, the 'Star' can be used for most of the year.

Scarifying blades, rigidly mounted in a spiral pattern around the rotor, rip out and slice through 'thatch', cutting slits in the ground surface.

The depth of the slits is controlled by the full width roller.

The slits allow air, water and nutrients to penetrate the soil surface.

The 'Star' destroys the breeding ground for harmful bacteria and insects under the thatch.

The mulch falls into the slits cut by the blades.

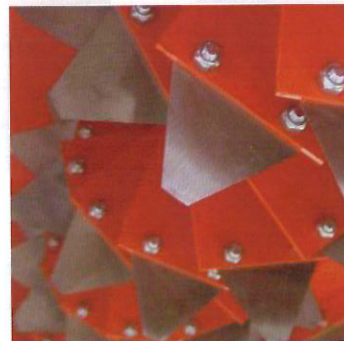

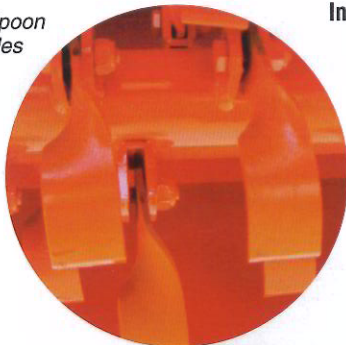

In around 30 minutes, the 'Star' can be converted to a top quality flail mower.

Square edged, overlapping 'spoon' blades and full width rear roller ensure level, accurate cutting and a high class finish.

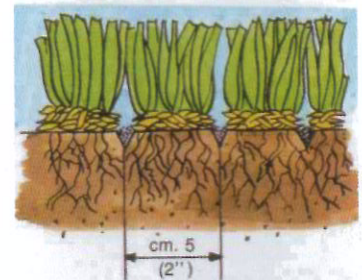

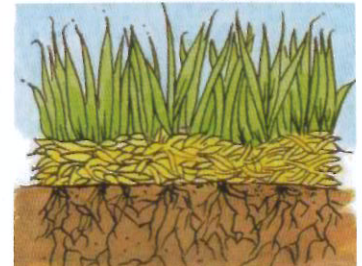

*Scarifying after the cricket season*

*Spoon blades*

*Aggressive blades*
